Education

Georgia Institute of Technology

Master of Science, Computer Science

January 2025 – December 2026

University of Houston

Bachelor of Science, Computer Science

Graduated: December 2024

Work Experience

IBM Software Engineer April 2025 – Present

- Led performance hardening for the IAM Istio gateway by building a comprehensive Go-based load-testing tool, deploying it with Docker and Kubernetes to an operational cluster and configuring separate Jenkins automation to run load tests and scale workers up and down to improve cost savings.
- Optimized resource usage through data-driven metrics while migrating from IBM Cloud Classic to Red Hat OpenShift (ROKS), identifying node inefficiencies that contributed to approximately \$250,000 in annual infrastructure cost savings.
- Architected and implemented a Blue/Green deployment strategy using the Dreadnought CD toolchain, automating cut-overs with custom Bash scripting and refactoring Helm charts to support zero-downtime releases.
- Engineered gateway reliability features, including data-driven rate limiting and TCP connection pooling, and expanded Context-Based Restrictions (CBR) with new rule properties.

ExxonMobil Software Engineer Intern May 2024 – August 2024

- Designed a Go/Python-based API generator on Azure/OpenShift Kubernetes to automate secure Snowflake API creation, reducing development time.
- Engineered automated deployment pipelines using Apache Airflow and Datadog, ensuring secure and reliable deployments within the Azure cloud environment.

Dycom Industries Software Engineer Intern June 2023 – August 2023

- Developed a Python decision tree linter integrated into the GitLab CI/CD pipeline, automating code quality checks and significantly reducing manual review time.

Vertical AIT Software Engineer Intern February 2023 – June 2023

- Designed and deployed an internal image modeling tool using .NET and Azure DevOps, streamlining industrial processes and reducing manual tracking time.

Project Experience

Opioid Abuse Risk Prediction Portal August 2025 – December 2025

- Developed a full-stack patient portal using React and Node.js that supports CRUD operations against a FHIR-compliant database.
- Integrated a machine learning model to predict a patient's risk of opioid abuse.

Award-Winning CNN for Breast Cancer Detection August 2024 – December 2024

- Developed a PyTorch CNN model for breast cancer detection, incorporating ResNet and AlexNet architectures, which achieved second place at the University of Houston's AI and Data Science Showcase.

Skills

Languages: Go, Python, Java, JavaScript/TypeScript, SQL, Bash

Cloud & DevOps: Kubernetes, Istio, Docker, CI/CD (Jenkins, Tekton), Helm, IBM Cloud (ROKS), Azure

Frameworks & Tools: React, Node.js, PyTorch, Redis, Snowflake, PostgreSQL, Sysdig, Datadog, Git
